Global Roadway Maintenance

## One Call Does All!

GRM prides itself in our  
"One Call Does All" policy.

Our goal is to provide a one-stop shop for our clients by providing snow and ice management, dust control, road stabilization, litter control, street flushing, sweeping and vacuuming, commercial property maintenance, and transportation of materials and equipment.

## Commercial Property Maintenance

GRM provides property maintenance programs for our commercial clients.

Our services are executed by experienced and certified personnel and include:

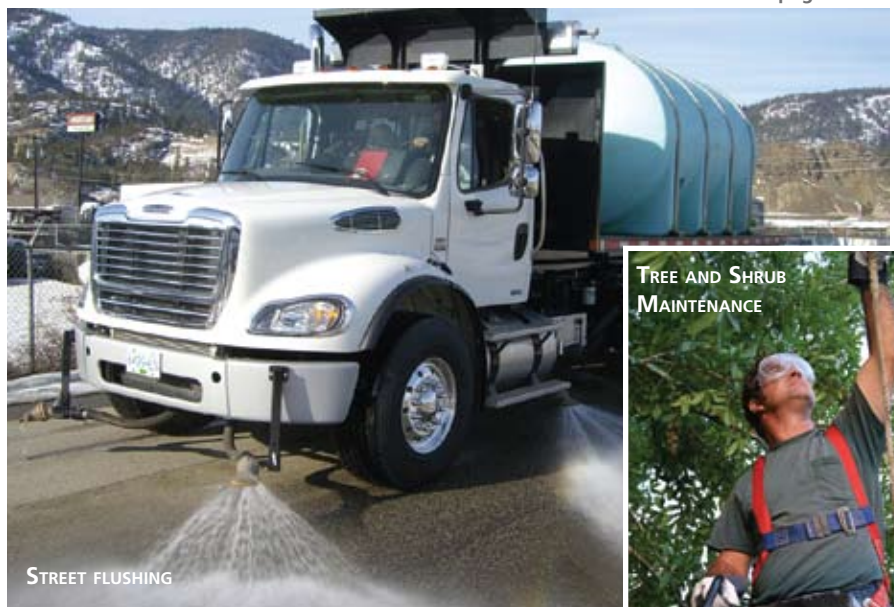

- Snow removal
- Line painting & eradication
- Curb and pavement repair
- Power sweeping / street flushing
- Pressure washing
- Graffiti removal
- Removal of litter and debris
- Waste bins (20/30 yds) for garbage/recycle disposal
- Landscape maintenance:
  - Noxious weed control
  - Weekly lawn maintenance
  - Tree and shrub maintenance
  - Shrub bed maintenance
  - Managing irrigation systems
- Bollard installation
- Speedbump installation
- Curbstop installation
- Fire suppression

> Continued from page 1

With a hot and dry summer in the forecast, GRM has its anti-icing units available as first response brush fire units. Our tandem axle truck and trailer are equipped with two transportation tanks that can haul more than 6000 USG gallons of water in one delivery. The truck is rigged complete with 2 flush nozzles on each side of the truck and a hose reel with 100ft of hard line with forestry nozzles.

## GRM can handle all dust control jobs

GRM is proud to announce that we've been appointed as the official dealer for Tiger Calcium Services in British Columbia. Tiger Calcium Services is one of the largest producers and suppliers of calcium chloride products in North America.

Calcium Chloride products are known for their ability to effectively melt ice and suppress dust, while having a minimal impact on the environment, roads, and vehicles.

Calcium Chloride liquid is one of the most effective dust control and road stabilization compounds available, making up over 80% of the material applied to Canadian roads annually (*Source: Roads and Transportation Association of Canada*). Because calcium chloride naturally attracts water, it pulls moisture from its surroundings until a balance has been reached between the vapour pressure of the calcium chloride and the atmosphere. As the humidity of the air increases, more moisture is absorbed by the calcium chloride, keeping a film of water on the road surface that attracts dust particles, resulting in effective dust control and road stabilization.

> Continued from page 2

**Advantages of calcium chloride dust control & road stabilization products:**

- Absorb moisture from the road surface creating a film of water that attracts dust particles
- Regulate moisture on road surfaces, giving them durability that results in a longer life span
- Reduces pot-holing and rutting
- Works as a road stabilizer, making roads safer year round
- Reduce aggregate loss by up to 75%
- Significantly reduces the frequency and costs associated with regular grading
- Help protect road bases from winter freezing and related frost heaving
- Lowers the freezing point of the moisture in road bases to nearly 60 degrees below zero
- Create a road with cumulative and long-lasting protection of road base with minimal migration

GRM CAN HANDLE ALL DUST CONTROL JOBS

Our "One Call Does All" services are offered in the following regions:

- Thompson/Okanagan
- Kootenays
- Columbia Valley
- Victoria

**Customer profile:**

**Black & McDonald**

**Black & McDonald employs 3500 people in a service area covering from Alert Bay, 200 miles from the North Pole, where they handle the unloading of aircraft at the military base, down to Kansas City and Salt Lake City where they are contracted to install and maintain street lighting.**

"Black & McDonald is mainly a facility maintenance company", explains Steve Niemeier, Project Manager for the Okanagan. "Although we have five offices in the USA, we mainly operate here in Canada. We look after the total maintenance requirements of hospitals, airports, and major buildings including construction of smaller projects in the 3-5 million dollar range. We employ 60 people in the Okanagan, who work at Kelowna International Airport, Penticton Airport, and the hospitals in both Kelowna and Vernon."

Black & McDonald takes care of all facility maintenance for both Kelowna General Hospital and the Vernon Jubilee Hospital, from snow removal to repairing beds, from HVAC work to landscaping.

Here in the Okanagan, the company is in a partnership with Infusion Health, a conglomerate of Graham Construction, Black & McDonald and Bilfinger Berger.

Every contract is customized to the client's requirements and specific needs. For example at the hospitals, they are not responsible for the house keeping of the facilities, whereas at the Kelowna International Airport (YLW) they provide these services.

"We do whatever the client wants us to do, including projects like data cabling, camera installation, office renovations etc. At YLW, we did all the electrical work for the runway extension. All of the in-house jobs are done by our own staff, while landscaping and snow removal are subcontracted out."

"When looking for subcontractors, we're not just looking for a good price. We want quality and reliability and we want the contractor to do it right the first time.

The past winter, GRM was contracted to provide snow removal services at the Vernon Jubilee Hospital and they did an excellent job. We are looking forward to working with them again in the future."

## Go Green initiative

GRM is an advocate for GO GREEN initiatives. GRM was recently contracted by UBC Okanagan for the hauling of unprocessed Styrofoam to be used in an innovative recycling program. Two of GRM's waste bins are permanently located at the UBCO site for collection of EPS (Expanded Polystyrene) foam. The Styrofoam will be chipped, broken down, and used in the production of a synthetic aggregate under the trade name Poly Rock. This 100% recycled product has been approved in BC since 2008 and is currently being used for septic systems. Jim Ripley, business owner, is looking into using Poly Rock for foundation drainage among other uses.

Other businesses that have their EPS packaging materials recycled include Okanagan College, Quails Gate Winery, Global Surface and various local restaurants. For more info, please visit [www.polyrock.ca](http://www.polyrock.ca).

GRM transports Styrofoam to Poly Rock's bin chipper.

## Contact information

Our experienced team is ready to assist and answer all your questions. Call 250-878-3195 or e-mail [management@grminc.ca](mailto:management@grminc.ca) for detailed information on our year round services.
